## Customer Reviews

Jane Lyttleton and William MacLean have written a three volume internal medicine series that should be in the library of every acupuncturist and practitioner of Oriental Medicine. The books are oriented around Organ Systems, with each set of Chinese Medicine diseases broken out by pattern. Each chapter looks at the major patterns, Chinese Medicine etiology, Western analogues, and gives symptoms, pulse, tongue, points, herbs and herbal modifications and prepared herbal formulas for each disease. Most chapters include a decision tree to identify patterns and a summary of herbs for each pattern. I use the series in my TCM Internal Medicine Class and it is much easier for my students than before the books were published. If I had to make a bare minimum library for practicing TCM I would include the three books from this series, Lyttleton's Treatment of Infertility with Chinese Medicine, 1e, Either Chen's or Bensky's Materia Medica and Formulas books and

Peter Deadman's A Manual of Acupuncture. Very worth the money.

This book has a lot of relevant information, it is concise and very organized. It is a great point of reference to have in your clinic as it includes TCM diagnosis as well as comparable western biomedicine diagnosis as well.

An excellent compilation of treatment protocols including the ancient and modern versions of formulas.

great book. very helpful for students of TCM
