Anything the Industrial Press puts out is worth having! Two other books I would recommend would be machinery's handbook about 1200 pages and math for machinists!!!! Machinery's handbook like commercial steel estimating are worth their weight in Gold!!!

I just started working for a steel fabricator and one of the first things they had me do was read this book. Coming from having no experience in the steel industry, this book has been such a great resource for me. This book really helped me build a foundation on the basics that I have been able to apply in my position. This is a must read for any student or rookie in the steel industry!

For a long time this book was needed by the steel fabrication industry! Written so anyone can

understand, it is perfect for both entry level and the experienced "Old Hand". I haven't found another book that comes close to this one in breaking down all aspects (e.g. estimating, detailing, project management and more) of steel fabrication. As an owner of a steel fabrication shop, it is my recommendation that this book be in the reference library of every steel fabrication shop!

It's a good book, and a decent value. However, It is definitely written for the novice estimator. I was hoping for something a little bit more advanced, because it spent a lot of time covering things that most people with construction experience will already know. Nonetheless, this book offers some good information and a solid foundation for beginners. Also, I was hoping for some topics on estimating field work, but this book really focused almost exclusively on shop fabrication. All-in-all a worthwhile purchase.

This book put years of estimating experience between nice binding. A good read for anyone wanting to learn the basic process of steel estimating. I have not found anything on the market like it. I would like to see something in this form for small projects aka misc steel, gates, handrails other weldments ect.

Another reference source for the professional estimator planner/ scheduler. The time charts are great for estimating structural steel and calculating the timing/scheduling of tasks
