Building National And Regional Innovation Systems: Institutions For Economic Development

Synopsis

Following the demise of the Washington Consensus, developing countries are looking for new ideas to guide their development. This innovative book suggests taking seriously some of the findings of evolutionary economics and paying specific attention to the institutions that matter for economic development, particularly those related to science, technology and innovation. The author highlights how the institutional framework that will allow countries to grow should include universities, government laboratories and policy incentives for human capital and business research and development. He argues that there are no simple policies and no 'one-size-fits-all' solutions, and that the majority of developing countries have not yet found the right combinations of institutions. The book suggests that building successful national and regional innovation systems requires at least one generation of continuous effort, significant trial and error, and a thorough knowledge of the experiences of the OECD countries that built those institutions in the past. It moves on to demonstrate how certain countries such as Canada, Finland and Singapore have succeeded in catching-up and how several others, for example Argentina, Egypt, Mexico and the Philippines, have failed. It then pinpoints the main industrial, science, technology and innovation policies required by developing countries to achieve their goals. This unique and timely book will appeal to postgraduate students of international economics, international business and development economics, as well as students of science, technology and society. Contents: Preface 1. Convergence, Catching Up, Institutions, and Growth 2. Systems of Innovation and Economic Development 3. Industrial and Technology Policy 4. Building Blocks of Innovation 5. Building Systems of Innovation: Three Phases and Three Cases v6. Developing Countries: Four Cases 7. Regional Systems of Innovation: Four Cases Conclusion: Putting it Together References Index
