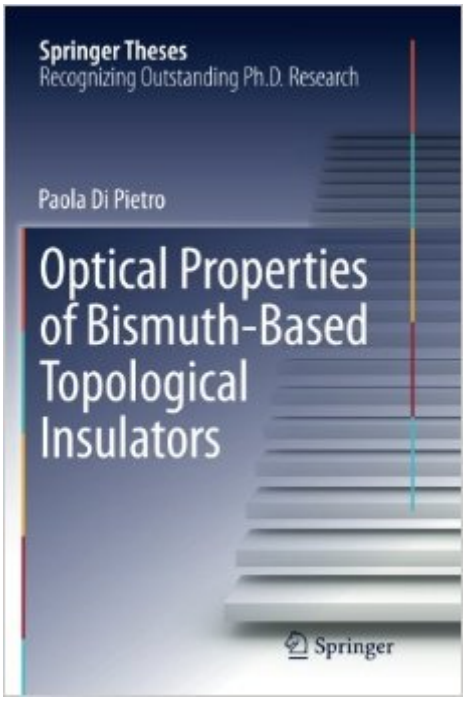
Optical Properties Of Bismuth-Based Topological Insulators (Springer Theses)



Synopsis

This book examines the low energy optical conductivity of TIs to distinguish the extrinsic charge contribution of the bulk from the intrinsic contribution of the surface state carriers. Describes apparatus, methods, sample preparation and analysis procedures.

Customer Reviews

This is a very well written thesis that will be very helpful for experimental researchers, showing different techniques and basic concepts on topological insulators. The basic concepts are shown in a clear way, focusing much more on the physics rather than in the mathematics.
